

Dating Profile Analyzer

Powered by n8n Automation — Intelligent Profile Optimization & AI-Powered Recommendations

The Dating Profile Problem

Most users struggle to create compelling profiles that generate meaningful connections. Without proper guidance, profiles underperform and opportunities are missed.

Low Response Rates

Users struggle with poor match quality and minimal engagement. Research shows 75% of profiles get fewer than 5 matches per week, leaving users frustrated.

Lack of Guidance

No actionable feedback on what's working or what needs improvement. Most users don't know why their profile underperforms or how to fix it.

Poor Photo Selection

Choosing the wrong photos drastically reduces profile visibility. Profile photo quality impacts 80% of first impressions and determines swipe decisions.

Generic Messaging

Copy-paste messages result in zero connections. Personalization increases response rates by 300%, but most users don't know how to craft engaging openers.

Our Solution: AI-Powered Profile Intelligence

Core Features

01

AI-Powered Analysis

Advanced AI models (GPT-4/Claude) evaluate profile completeness, tone, and appeal using natural language processing to analyze bio effectiveness.

02

Detailed Report & Insights

Comprehensive 10+ page PDF report with actionable recommendations. Scores for bio, photos, interests, and overall profile strength.

03

Smart Photo Recommendations

Computer vision ranks your photos by predicted engagement, suggests optimal photo order and identifies gaps in your visual story.

04

Personalized Chat Templates

Custom conversation starters based on match profiles. Generated messages that feel authentic and engaging, not robotic.

What Makes Us Unique

30-Second Analysis

Fastest automated profile evaluation in the market with instant, actionable feedback.

Multi-Platform Compatible

Works seamlessly with Tinder, Bumble, Hinge, and other major dating platforms.

Privacy-First Design

No data storage or tracking. Your information is processed and immediately discarded.

Free & Open-Source

Completely free to use with transparent, community-driven development.

How It Works: Seamless Automation

Our streamlined workflow delivers comprehensive profile analysis in just 30 seconds, from upload to actionable insights.

Upload

User uploads profile screenshots, enters text, or shares profile URL through our simple interface.

Data Extraction

n8n triggers automation workflow. AI extracts text, photos, and profile metadata using OCR and vision API processing.

AI Analysis

Profile sent to Claude/GPT-4 for multi-dimensional scoring: bio quality, photo appeal, and interests alignment.

Report Generation

Automated PDF creation with charts, recommendations, and profile score (0-100) in professional brand formatting.

Delivery

User receives comprehensive analysis via email or download with actionable insights ready to implement immediately.

40%

Match Rate Increase

Average improvement in match rate after implementing recommendations

3x

Response Rate Boost

Users see triple the response rate with personalized conversation starters

5h

Time Saved

Hours of profile trial-and-error eliminated with instant AI feedback
